Objective

Software Engineer with 3+ years building high-performance, low-latency backend systems for financial technology and trading platforms. Strong in **C++**, **Java**, and **Go**, with production expertise in gRPC, Kafka, PostgreSQL, and HFT-adjacent system design.

Work Experience

Flair Labs

Software Engineer, Mumbai Oct 2025 – Present

- Developed Java Spring Boot backend services and REST APIs for CRM and Dynamic UI applications in financial platforms, implementing multi-tenancy, dynamic tenant resolution, authentication, and authorization.
- Designed and optimized high-performance PostgreSQL-backed services, leveraging advanced database capabilities including table partitioning, indexing, WAL, tsvector full-text search, UNNEST-based bulk operations, and pg_cron; developed and integrated platform capabilities such as notification systems, **currency exchange** services, caching, and **Cloudflare** integration.

63 Moons (now Synapsewave Innovations)

Software Engineer, Mumbai Feb 2023 – Oct 2025

- Engineered **C++**, **Go**, and **Node.js** microservices using Protocol Buffers and **gRPC**, reducing inter-service communication latency by **30%**.
- Built proof-of-concepts and backend services using Aerospike, PostgreSQL, Redis, and Kong API Gateway to evaluate scalable distributed architectures.
- Led automation initiatives for a surveillance and risk management platform, reducing regression testing time by **80%** through a custom in-house testing framework.

Skills

Programming: Debugging and coding in each of **C/C++**, **Java**, **Go**, Python, JavaScript

Systems Programming: Linux (Red Hat), Multithreading, Concurrency, Networking, Distributed Systems

Backend Technologies: REST APIs, gRPC, WebSockets, Spring Boot, Gin, Node.js, Kafka, RabbitMQ

Databases: PostgreSQL, MySQL, Redis, MongoDB, Aerospike

DevOps & Cloud: Nginx, Docker, **AWS**, Kubernetes, Argo CD, Kustomize, Jenkins, Git, Bash, CMake

Networking: TCP/IP, UDP, HTTP/HTTPS, DNS, CDN, DHCP, NAT, Load Balancing

Projects

Kafka-MySQL-Server

[Github]

Aug 2023 – Dec 2023

- Developed an event-driven processing application using Node.js, Express, Worker Threads, Kafka, and MySQL for high-throughput data handling.

Communication Service (Spring Boot)

[Github]

Jan 2026 – Feb 2026

- Built a multi-channel communication microservice in **Java Spring Boot** with a channel-agnostic, tenant-aware publishing API and dynamic routing, using the **Adapter Pattern** for SMTP, Twilio, and Firebase integrations.

Go-k8-service

[Github]

Sep 2025 – Oct 2025

- Built production-grade Go microservices with modular, clean architecture, deployed via Kubernetes manifests and Helm charts, with integrated logging and automated health checks ensuring **99.9%** uptime in production.

Education

Rajasthan Technical University, Kota

2019 – 2023

Bachelor of Technology in Computer Science Engineering

CGPA: 8.9

Certifications

From Cisco, edX, NPTEL, freeCodeCamp related to **Networking**, **Realtime**, **Scalable**, **Performant** high-frequency trading system design with **C++** and **Go**, along with cloud computing and distributed systems.
